

AAUW Fremont Branch extends its 'STEM Pipeline' program for girls to a 'Pathway to STEM' through high school, with an interactive panel discussion for 6th, 7th and 8th grade girls and parents. Panelists from the tech industry, current college students pursuing STEM, and high school juniors and seniors discuss how they continued to stay engaged in STEM as they move through middle and high school.

Pathways to STEM: What attendees said...

My daughter definitely felt the event gave her the right sources and it was encouraging for her to learn from girls who have been through it

As a parent, I felt the time well spent and the discussion very useful. It had very useful pointers as well as how engineering can be integrated with other sciences

My daughter was definitely motivated to try out some coding

And we proudly hosted our 38th Mother/Daughter STEM Discovery Day where eighty new 3rd and 4th graders and their mothers stepped on to our Pathways to STEM for girls. AAUW Fremont Branch has been offering this program for 3rd, 4th, 5th and 6th graders in the Tri-City area since 1991. Many of our attendees return year after year for this popular hands-on morning of fun and learning. They attend four, forty-five minute STEM activities led by women engineers, teachers and our own Tech Trek alumni who are now role models for the younger girls, while sharpening their presentation and leadership skills.

STEM Discovery Day: What attendees said....

We are grateful to have such an inspiring girl-focused STEM event in our area. A huge thank you to everyone who helped make it possible

Amazing experience, studying with your own daughter in such a structured environment is only possible because of your efforts

I especially applaud the many young instructors who were given the opportunity to teach and show how poised, intelligent and well spoken they all were for being high schoolers
